

E*Prescribe[®] Integrated Prescription Information Management System

E*Prescribe[®] Integrated Prescription Information Management System solutions provide physician’s with point-of-care access for the transmission of prescriptions electronically to a patients pharmacy of choice; and to the clinical decision support network including interactions with existing drugs, duplicate medications, drug allergies and inconsistency in dosage. Given that each prescription is electronically captured, this innovative process provides legible certification, decreasing prescription errors caused by hard-to-read handwriting. This integrated automation process and vital inspection of drug interactions and allergies, leads to improve patient safety and increased efficiency. In addition, the system provides the necessary information as it relates to a selected drug coverage by the patient’s Health Plan. E*HealthLine’s E*Prescribe[®] and Electronic Health Records systems check for patient allergies to ensure the medication will not have any adverse effects. This drug interaction tool, alerts the doctor if a particular drug is not recommended for an individual’s protection. Therefore, fewer phone calls are required from pharmacies to physicians for prescription clarification.

Benefits:

E*Prescribe[®] benefits many members of the prescribing value chain, payors, patients, pharmacy benefit managers, pharmacies and the physician’s office.
